| Material                                                      | <div></div> <p>APET (amorphous polyethylene terephthalate)</p> <p>APET film (layers A-B-A) produced by RETAL Baltic UAB has up to 100% in the middle layer "B" (80-90%). secondary raw materials, in the outer layers "A" - there is only primary PET raw material (5 - 10%). In order to test the suitability of APET film for food contact, all kinds of film migration tests are performed. All migration tests performed so far show that the APET film complies with EU Regulation no. 10/2011 requirements, therefore the manufacturer claims that the APET film has outer layers made only from primary PET raw material and these layers are safe functional barriers to be used in contact with food products.</p> <p>Document: Retal Baltic declaration on functional barrier, 08/17/2020</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                         |                                         |                                |                                        |                   |           |                |                |                    |               |          |                   |        |                                |                                        |      |                                |        |                                  |                                         |   |                                |        |                                  |                                         |          |                 |      |                                |                                 |    |                                |         |                               |                                     |    |                                |           |                                |                                     |   |       |      |                               |                                     |   |       |        |                                  |                                         |   |       |          |                                  |                                     |   |       |          |                                  |                                     |   |       |         |                                  |                                     |   |       |         |                                  |                                         |   |       |          |                                  |                                         |   |       |
